

SOLAR PRO **PRESS RELEASE**

About **Solar Pro Films**

Solar Pro is dedicated to pushing the boundaries of innovation. With a commitment to excellence, we continually strive to enhance the quality of life for our customers through cutting-edge solutions. Solar Pro has worked with countless clients, corporate companies and even widely known hotels like Marina Bay Sands, where you enjoy the comfort of the hotel room, with our solar films installed.

One of Solar Pro's bestsellers, the **SP Nano Sputtered Film**, provides quality satisfaction and its popularity is proof of Solar Pro's promise to provide you with your ideal choice of solar films.

Love indulging in the breathtaking views and embrace the natural light streaming through your windows without being hindered by unwanted heat?

Elevate your window experience with our cutting-edge window films, offering not just aesthetic enhancement but also providing protection against harmful UV rays. Say goodbye to the worries of heat damage to your skin or furniture!

SP Nano Sputtered Film

The star performer, the SP Nano Sputtered Film, uses the most advanced sputtering technology, seamlessly marrying the advantages of metallic and ceramic films. The heat-deflection of a metallic film combined with the high infrared rejection of a ceramic film is a top-tier solution!

This not only caters to your aesthetic preferences but is also a pocket-friendly choice! It efficiently curtails heat, making it the perfect companion for those who cherish natural light.

Whether you reside in a sunny estate or a condominium with strict regulations, our SP Nano Sputtered Film is the ideal, versatile option.

Transforming your space into a haven where panoramic views and abundant sunlight exist harmoniously, the films also ensure that your furnishings remain vibrant and unscathed.

The SP Nano Sputtered Film for windows is not just a literal sight to behold, but also your answer to technological innovation and new age comfort in your space.

One of the popularly known solar films in the market is the Ceramic Film for how it rejects heat. However, the SP Nano Sputtered Film does more than that with its combination feature of rejecting and reflecting heat. The percentage of Total Solar Energy Rejected, also known as, the Total Effectiveness, is still the highest and best available, proving it to be an ideal choice!

SP Nano Sputtered Film is just one of the choices Solar Pro offers. We provide free consultations and quotations based on your needs and wants; with the array of films we carry, for your choosing at Solar Pro Films.
